

Motivation

Why BS CS versus MS CS?

- Targets students interested in hybrid careers
- For students with other undergraduate degrees, getting an M.S. CS would require taking most all of the classes in this program first
- The compressed curriculum (60 credits of computer science) allows students to quickly ramp up their programming skills, so that in as little as 12 months they can have a degree in CS.
- No program of this type is offered in the country at this point – there are full B.S. and full M.S. programs but no program targets this untapped market.
- Starting salaries for BS CS are well above most other occupations (\$60k-\$95k)
