SSI Shredding Systems Inc.

Software Development Intern

We are searching for a university student or recent graduate to help us expand on internal software. This software, written in VB.net with a SQL database, is an important tool for our employees, and we are looking to expand it even further and add more utility. We have already identified and defined many potential improvements, and we are now in need of another developer to help turn these ideas into a reality. You would be working alongside a full-time engineer that started this software from scratch.

The ideal candidate would be an energetic individual that enjoys problem solving, has an appreciation for good user interface, and is excited by the idea of working alongside the users of their software. This position would be in-person in Wilsonville, Oregon, but some flexibility and remote work may be available after a learning period is completed and the new employee shows independence in their work. Hours can be flexible to accommodate school schedules. This opportunity is designed for a summer break (approximately June through August), but additional work may become available after the internship.

Job Duties and Responsibilities

- Help develop a VB.net windows application by working on all levels of the project (front end, back end, and database)
- Communicate frequently with a full-time engineer
- Write documentation as changes are made to the software
- Test and troubleshoot changes to the software

Knowledge, Skills, and Abilities

- T-SQL
- VB.net or similar language
- Technical writing
- Web development (nice to have)

Job Type: Internship (June to August, 2022)

To apply, send your resume and any other additional information (cover letter not required) to Benjamin Bellman (bbellman@ssiworld.com).
