UX Engineer Intern

The Company

At HazAdapt, we are building the world’s most trusted and human-friendly technology for emergency communication and public wellness. Our products are used by both emergency managers and the public to facilitate hazard adaptation and foster a level of resilience and inclusivity that has not been seen in the industry before. Our team is small and cross-functional, with a focus on honesty and growth.

The Role

We’re looking for a UX engineer intern to add to our team of developers building our premier suite of emergency engagement applications. This is the primary platform for the public and emergency managers to interact with, customize, and share emergency information with their families and community members. You’ll work closely with frontend engineers to implement a complex mobile client.

This is not your typical internship; you’ll be treated like a full member of our development team, and that will come with a lot of responsibility. We’re excited to see our interns flourish and make a big impact!

Here are a few examples of what you might be working on:

- Translating tested and reviewed interface designs into reusable frontend components
- Collaborating with frontend software engineers to ensure components and app interfaces are responsive to device parameters/restrictions and support important accessibility measures such as screen readers

The pace is fast here, and people often wear multiple hats. Our mobile team is working with React Native in an Expo environment, and our web team is working in a React/Next.js environment. We don’t expect you to have deep experience in our tech stack, but you should have some experience working in an Agile environment with JavaScript/TypeScript and React or React Native. As an intern, we support and encourage learning on the job.
Who We Are Looking For

Required

- At least 1 year of experience developing in React or React Native
- A hunger for growth, curiosity, and drive to build a revolutionary product is key.
- Highly conscientious - We put a lot of trust in our team, and that comes with some big responsibilities.
- Strong communication skills will be crucial here, especially now that we are remote, and we expect that you are capable of being open when it comes to work.

Pluses

- An understanding of the principles of accessibility and an ability and eagerness to build products that are accessible to users with different abilities.
- There are huge kudos to be had if you have experience building inclusive products and working on A11Y accessibility standards.

Perks

This is a pre-revenue startup, and the work you do here is incredibly impactful. You will have the opportunity to seriously make an impact on a wide range of features, and the company as a whole.

How to Apply

Email us at team@hazadapt.com with your:

- Resume
- Cover letter
- A link to a showcase of your work (e.g. GitHub/GitLab or a personal website)

In your cover letter, tell us why you want to be a part of HazAdapt, and feel free to share anything that you feel makes you a special fit for our mission.
